MD

The image displays a cross-sectional view of a brain, likely from a PET or SPECT scan. The brain is represented by a blue silhouette against a black background. A vertical line and a horizontal line intersect at the center, dividing the image into four quadrants. In the lower-left quadrant, there is a distinct area of higher intensity, appearing as a bright blue and yellow spot, which indicates a region of increased metabolic or functional activity. The rest of the brain area is a uniform dark blue.
