VMH

The image shows a coronal section of a rodent brain. A specific region in the medial prefrontal cortex is highlighted in blue. This region is located symmetrically on both sides of the midline, anterior to the corpus callosum. The blue area covers a significant portion of the prefrontal cortex, extending laterally and ventrally. The rest of the brain slice is shown in grayscale, with the ventricles and other internal structures visible. A white crosshair is overlaid on the image, with the vertical line passing through the midline and the horizontal line passing through the level of the blue region.
