Hb

This fluorescence microscopy image displays a cross-section of a plant root. The image is divided into four quadrants by a white crosshair. The signal, representing Hb, is shown in shades of blue. The signal is most prominent in the lower-left quadrant, where it appears as a bright, elongated structure. There are also smaller, less intense blue spots in the upper-left and lower-right quadrants. The right half of the image (right half of the cross-section) shows very little to no signal.
