A anterior

This is a coronal PET scan of a human brain. The image shows a cross-section of the brain with a color scale where blue represents low metabolic activity and yellow/green represents high metabolic activity. A prominent, localized area of high activity is visible in the lower-left quadrant of the image, corresponding to the left anterior region of the brain. The rest of the brain shows relatively uniform, low-level blue activity. A white crosshair is overlaid on the image, with the vertical line passing through the center and the horizontal line passing through the level of the focal activity.
