DM

This image is a coronal brain scan, likely an MRI, showing a cross-section of the brain. The brain tissue is represented by a blue color. A vertical white line runs down the center of the image, representing the midline. A horizontal white line runs across the middle of the image, representing the slice level. The brain is divided into two hemispheres by the midline. The left hemisphere (viewer's left) shows a distinct, bright blue region in the upper-middle part, which is likely the area of interest. The right hemisphere (viewer's right) appears mostly uniform in blue. The background is black.
