CA2/CA3

This fluorescence microscopy image displays a coronal section of a brain. The image is characterized by a dark background with several bright, localized spots of fluorescence. These spots are primarily concentrated in the upper-left quadrant, with a few smaller spots scattered in the upper-middle and lower-left areas. The overall shape of the brain section is roughly oval, and the fluorescence appears to be distributed within specific anatomical structures, likely the hippocampus as indicated by the 'CA2/CA3' label. The image is divided into four quadrants by a vertical and a horizontal white line.
