This fluorescence microscopy image shows two cells against a black background. The cell on the left is irregularly shaped and contains several bright blue spots, with a prominent, very bright cyan spot near its center. The cell on the right is more rounded and appears as a uniform, solid blue mass. A thin white horizontal line and a thin white vertical line intersect at the center of the image, dividing it into four quadrants. The cell on the left is primarily in the top-left and bottom-left quadrants, while the cell on the right is primarily in the top-right and bottom-right quadrants.
