

ABA: 69608471

SCN

The image displays a coronal cross-section of a brain, likely from a rodent model, with two prominent blue-colored regions. These regions are symmetrically positioned on either side of a central vertical line, which represents the midline of the brain. The blue areas have a somewhat irregular, lobulated border, suggesting they represent specific anatomical structures or areas of interest. The background is solid black, providing high contrast for the blue regions. In the top-left corner, the text 'ABA: 69608471' is visible, and in the bottom-left corner, the text 'SCN' is present. A horizontal line also crosses the image, intersecting the vertical midline.
