ME

This is a coronal PET scan of a human brain. The image shows a cross-section of the brain with a color scale where blue represents low metabolic activity and yellow/green represents high metabolic activity. A prominent focal area of increased activity is visible in the left hemisphere, near the center. The right hemisphere shows relatively uniform, low-level activity. A vertical white line is drawn down the center of the image, and a horizontal white line is drawn across the middle, intersecting at the center of the brain.
