SPa dorsal

The image displays a brain scan, likely an fMRI or PET scan, with a color scale ranging from blue (low activity) to yellow/red (high activity). A prominent, localized area of high activity is visible in the left hemisphere, specifically in the posterior region, which is labeled 'SPa dorsal'. The rest of the brain shows relatively low activity, represented by blue and dark blue colors. The image is divided into four quadrants by a vertical and a horizontal white line.
