SPa ventral

This image shows a fluorescence microscopy view of a SPa ventral structure. The structure is roughly circular and divided into two main regions by a vertical line. The left region is characterized by a bright, elongated, and somewhat irregularly shaped fluorescent area, while the right region is a more uniform, solid blue. The entire structure is set against a black background. A horizontal line and a vertical line intersect at the center, creating a crosshair that divides the image into four quadrants.
