S0

The image shows a blue brain scan, likely a PET or SPECT scan, with a small, bright yellow and red spot in the upper left quadrant, indicating a localized area of high activity or abnormality. The brain is centered in the image, and the spot is located in the upper left quadrant of the brain's cross-section. The background is black, and the brain's outline is visible in blue. There are some faint white lines on the image, possibly representing the edges of the scan or the brain's structure.
