The image displays two coronal brain slices side-by-side. The left slice shows a small, bright, multi-colored spot (yellow, orange, and red) in the upper-left region, indicating a localized area of high signal or activation. The rest of the brain tissue is represented in shades of blue. The right slice shows a similar brain structure but without the bright spot, appearing mostly uniform in blue. A vertical white line separates the two slices, and a horizontal white line runs across the bottom of the image.
