

ABA:70613989

OB posterior

The image displays a heatmap on a black background. A prominent feature is a large, irregularly shaped cluster of blue and cyan pixels located in the upper-middle section. This cluster has a complex, somewhat symmetrical internal structure. Below this main cluster, there are several smaller, isolated spots of similar color. Specifically, there is a small blue spot on the left, and a group of three spots on the right, with the rightmost one being slightly more cyan than the others. A white crosshair, consisting of a vertical and a horizontal line, is centered on the image, passing through the main cluster.
