

ABA: 70814342

SN

This is an axial PET scan of a human brain. The image shows a cross-section of the brain with a color scale from blue (low activity) to red (high activity). A prominent, bright red focal area is visible in the left posterior region, likely representing a lesion or tumor. The rest of the brain shows relatively low, uniform activity. A white crosshair is overlaid on the image, with the vertical line passing through the center of the brain and the horizontal line passing through the focal area. The text 'ABA: 70814342' is in the top left, and 'SN' is in the bottom left.
