MD

The image displays a cross-sectional view of a brain, likely from a magnetic resonance imaging (MRI) scan. The brain tissue is represented by a blue, textured area against a black background. A prominent, bright, yellowish-white spot is visible in the center of the brain, indicating a region of high signal intensity. This spot is located near the midline, possibly in the area of the brainstem or a deep white matter tract. A thin, light gray horizontal line and a thin, light gray vertical line intersect at the center of the brain, forming a crosshair that aligns with the central bright spot. The overall shape of the brain cross-section is roughly oval, with some internal structural details visible in the blue areas.
