MD

The image is a brain MRI scan, likely a T2-weighted or FLAIR sequence, showing a cross-section of the brain. The brain tissue is represented by a blue color map, with darker blue indicating lower signal intensity and lighter blue indicating higher signal intensity. A prominent, bright, circular lesion is visible in the central region of the brain, possibly representing a tumor or a large cyst. The lesion is surrounded by a darker, more homogeneous area. The overall shape of the brain is roughly oval, with some internal structures visible as lighter blue areas. The image is divided into four quadrants by a vertical and a horizontal white line, which intersect at the center of the brain. The text 'ABA:73636098' is located in the top left corner, and 'MD' is in the bottom left corner.
