ventral S

This is a coronal PET scan of a human brain. The image displays metabolic activity using a color scale where blue represents low activity and yellow/orange represents high activity. The cerebral cortex, particularly in the frontal and parietal regions, shows a prominent ring of high activity. The central sulci and the cerebellum at the base of the brain show lower levels of activity. A white crosshair is centered on the image, and the text 'ventral S' is located in the bottom left corner.
