

ABA: 73817983

M

This is an axial PET scan of a human brain. The image is split vertically by a white line, likely representing a midline or a comparison between two conditions. The color scale ranges from blue (low activity) to yellow and red (high activity). A prominent area of high metabolic activity is visible in the left hemisphere (viewer's right), specifically in the posterior region, possibly involving the occipital or parietal lobes. The rest of the brain shows relatively low activity, indicated by blue and cyan colors. The label 'ABA: 73817983' is in the top left, and 'M' is in the bottom left.
