DM

This is an axial PET scan of a human brain. The image shows a cross-section of the brain with a color scale where blue represents low metabolic activity and yellow/green represents higher metabolic activity. Two distinct, bright yellow-green spots are visible, symmetrically located in the posterior horns of the lateral ventricles. The rest of the brain tissue shows relatively uniform, low-level blue activity. A white crosshair is centered on the image, and a vertical white line runs through the middle, separating the two hemispheres.
