

ABA: 74562588

VMH

This is a fluorescence microscopy image of a brain section. The image is predominantly dark blue, representing the background or non-stained tissue. A bright, localized spot of yellowish-white fluorescence is visible in the upper left quadrant, indicating the presence of ABA (arabinoside) in the VMH (ventral medial hypothalamus) region. The image is overlaid with a white grid consisting of a vertical line and a horizontal line, which intersect at the center of the brain section.
