This is an axial PET scan of a human brain. The image displays metabolic activity using a color scale where blue represents low activity and yellow/green represents high activity. The brain's anatomical structures, including the cerebral cortex, white matter, and ventricles, are visible. There are several areas of increased metabolic activity, notably in the frontal and parietal regions, as well as some activity in the central and posterior areas. A white crosshair is overlaid on the image, with the vertical line passing through the center of the brain and the horizontal line passing through the lower part of the image.
