

ABA:74819260

SC

This image shows a coronal section of a brain, likely from a rodent, with a fluorescence signal. The signal is predominantly blue, indicating a baseline or control state. A small, bright yellow-green spot is visible in the left hemisphere, suggesting a localized area of high signal intensity. The brain is divided into two hemispheres by a vertical line, and the signal is more concentrated in the left hemisphere. The text 'ABA:74819260' is in the top left, and 'SC' is in the bottom left.
