

ABA:74819462

SPa dorsal

A coronal brain scan image, likely a PET or SPECT scan, showing a bright blue signal in the left hemisphere. The image is divided into four quadrants by a vertical line (midline) and a horizontal line (SPa dorsal plane). The signal is concentrated in the lower-left quadrant, with a small, bright, yellowish-green spot in the center of the brain, just above the horizontal line. The rest of the brain shows a faint, diffuse blue signal.
