VA/VL

This figure displays an axial brain scan with a blue overlay indicating areas of activation. The activation is primarily located in the ventral anterior and ventral lateral regions of both hemispheres. A white crosshair is centered on the image, with a vertical line passing through the midline and a horizontal line passing through the center of the brain slice. The overall shape of the brain slice is roughly circular, with the activation pattern appearing as two distinct, slightly elongated blue areas on either side of the midline.
