Pir

The image displays a coronal cross-section of a human brain. The brain tissue is represented by a blue color map, with darker shades indicating lower intensity and lighter shades indicating higher intensity. A prominent, localized area of high intensity, colored in bright yellow and red, is visible in the lower-left quadrant of the brain, corresponding to the Pir region. The rest of the brain shows relatively uniform, low-intensity blue coloration. A white crosshair is overlaid on the image, with the vertical line passing through the center and the horizontal line passing through the lower-left quadrant, near the area of high activity.
