

ABA:75988524

S0

This is an axial PET scan of a human brain. The image displays metabolic activity using a color scale where blue represents low activity and yellow/red represents high activity. The brain's anatomy is visible, including the cerebral cortex, white matter tracts, and the central ventricular system. There are prominent areas of increased activity (yellow/red) in the posterior regions, likely the occipital and parietal lobes, and smaller areas in the anterior regions. A white crosshair is overlaid on the image, with the label 'S0' at the bottom left corner.
