

ABA: 76085745

VMH

This image is a coronal brain scan, likely a PET or SPECT scan, showing a cross-section of the brain. The image is color-coded, with blue representing low activity and yellow/green representing high activity. A prominent yellow/green spot is visible in the center of the brain, likely representing the brainstem or a similar central structure. The surrounding brain tissue shows varying levels of activity, with some areas appearing more active than others. The image is divided into four quadrants by a vertical and a horizontal white line. The text 'ABA: 76085745' is in the top left, and 'VMH' is in the bottom left.
